

JANHAVI SAHASRABUDHE

AI TECHNICAL PROGRAM MANAGER | TECHNICAL PROGRAM & DELIVERY | AI / DATA / CLOUD

mcsjsanhavi@gmail.com | 742-085-0160 | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Technical Program Manager with 5+ years of experience driving end-to-end delivery of complex technical, cloud, data, and AI-enabled initiatives. Experienced in Agile/Scrum execution, JIRA-based planning, sprint management, dependency and risk tracking, cross-functional coordination, and executive-ready status reporting. Led 12+ projects across engineering, data, and business stakeholders; delivered \$3M+ in cloud cost savings and reduced reporting effort by 70%. Strong working understanding of AI/ML, Generative AI, telemetry-driven systems, data platforms, and AI-enabled workflow automation, with a delivery-first mindset focused on predictable execution and removing blockers.

CORE COMPETENCIES

Program Execution: End-to-End Delivery, Roadmaps, Milestones, Deliverables, Dependencies, RAID, Blocker Removal

Agile Delivery: Scrum, Sprint Planning, Backlog Grooming, JIRA, Kanban, Agile Ceremonies, Predictable Delivery

Stakeholder Management: Cross-Functional Coordination, Engineering/Data/Business Alignment, Status Reporting, Accountability

AI / ML & Data: Generative AI, LLM Concepts, AI-Enabled Workflows, ML Lifecycle Concepts, Telemetry, Data Pipelines, Analytics

Process Excellence: Workflow Standardization, SOPs, Documentation, Continuous Improvement, Handoffs, Incident Management

Technology: Microsoft Azure, Cosmos DB, Azure SQL, Power BI, Streamlit, SQL, C#, JIRA, Confluence, Notion

PROFESSIONAL EXPERIENCE

Ecowiser — Program Manager | 04/2024 – 10/2024

- Owned cross-functional execution of data-driven growth and monetization initiatives, translating business priorities into measurable delivery plans and coordinating execution across stakeholders.
- Scaled user acquisition through structured growth experiments, increasing monthly views by 60% and generating 10K+ new impressions per month.
- Improved monetization across B2C and B2B programs, increasing revenue contribution from 7% to 20% and daily active users by 7.5%.
- Used KPI tracking and analytics to identify execution opportunities, monitor outcomes, and support prioritization decisions.

Salt Studio — Program Manager | 01/2022 – 08/2023

- Led 6 cross-functional teams through sprint-based execution, coordinating deliverables, handoffs, risks, and dependencies while reducing project costs by 18% without impacting timelines.
- Established sprint-based delivery practices that reduced project handover errors by 24% and improved execution consistency.
- Coordinated 10+ vendor partnerships, reducing response time by 50% and improving vendor satisfaction by 30%.
- Standardized workflows and documentation to improve accountability, handoffs, and delivery reliability across teams.

Microsoft — Program Manager, Azure | 02/2016 – 11/2017

- Owned delivery and operational execution across 12 Azure projects, coordinating engineering stakeholders, tracking milestones and dependencies, and improving service quality and operational efficiency by 8.5%.
- Managed Azure data platforms spanning 100 PB to 1 EB, using telemetry-driven diagnostics to address 24–30 daily customer issues and remove operational bottlenecks.
- Delivered \$3M in cloud cost savings by identifying and optimizing unused resources and data streams.
- Built Power BI dashboards across 10+ services, increasing visibility by 40% and reducing recurring reporting effort by 70%.
- Applied Agile execution practices across technical teams to improve delivery discipline, service reliability, and stakeholder visibility.

PROFESSIONAL EXPERIENCE — CONTINUED

Microsoft — Service / Software Engineer Intern, Azure GNS | 05/2015 – 08/2015

- Developed internal analytics tools using Azure SQL and Power BI, improving team productivity and insights by 33%.
- Worked with technical stakeholders to translate operational data into actionable analytics and reporting.

Cognizant — Programmer / Business Analyst | 08/2012 – 11/2013

- Analyzed 150+ financial applications, identifying process gaps and opportunities to improve operational efficiency.
- Led UAT and defect tracking, coordinating issue resolution and improving system reliability and business workflows.

AI / TECHNICAL PROGRAM PROJECTS

- AI Incident / Ticket Monitoring System — Designed an AI-enabled workflow for automated issue detection and alerting using telemetry data, supporting proactive incident management.
- AI-Powered Program / Project Business Intelligence System — Built predictive and descriptive analytics dashboards to improve program visibility, reporting, and decision support.
- AI Cloud Cost Optimization System — Identified unused cloud resources and opportunities for cost optimization through data-driven analysis.

EDUCATION

MS, Computer Science — Purdue University

BE, Information Technology — University of Pune
